Test case for Mystery Number Game

Test Case/type	Input(operation input)/reason I choose	Expected output (the number that the user thought)	Actual output
1) For begin	0	0	0
2) For begin	90(integer number)	9	9
3) For intermediate	70/4/28(integer number)	7	7
4) For intermediate	14/0.7/5.6(decimal number)	Invalid input because program not accept double(0.7/5.6)/ 1*	1*
5) For expert	-20/-10/-49/-1/-18(negative number)	Invalid input because program not accept negative number/-2	2*
6) For expert	2000/40/5001/100/1800(big numbers)	200	200

*the program will show that the input is incorrect so it will ask again the users write the acceptable input so in case 4 if the user writes 5 instead of 5.6 the output is 1. In case 5 if the user writes 18 instead of -18 the output is 2.
